## Quartz Manager 1.0.2

Bug fix release

### Resolved Issues

- [QTZ-156](#) - Do not save connections authentication data to connection-store.xml, use browser cookies instead
- [6148](#) - Quartz manager remember the latest username/password details

## Quartz Manager 1.0.1

Update the Quartz Manager to run with the 2.1.0 version of Quartz Scheduler.

### Resolved Issues

- [5774/5926](#) - Successful or Failed Jobs List is not always consistent with the jobs that were triggered

## Quartz Manager 1.0.0

### Overview

Quartz Manager provides enterprise-class monitoring and management capabilities for use in both development and production. It provides access to one or more Quartz Scheduler instances from a single web console. The application runs either as a Java web app in your own container (such as Tomcat), or as a standalone Java app with its own Jetty container. The app functions as a JMX client to the remote Quartz Schedulers. The web user interface is an Adobe Flex client application that runs in web browsers with an Adobe FlashPlayer plug-in.

### Details

#### Features

- Manage multiple Quartz Schedulers embedded within any remote JVM
- Connect to remote Quartz Schedulers via JMX; support is included for JMX Authentication and SSL
- View status and details, pause, resume and shutdown schedulers
- Create, update, and monitor the jobs for a Quartz Scheduler
- Schedule, pause, and remove triggers

Note: some features, such as the ability to schedule triggers, and to add and schedule job in a single step - as described in the product documentation packaged with the product - require Quartz 2.0

#### Deployment Options

- As a standalone Jar (with it's own built-in Jetty container)
- As a deployable War file - compatible with Apache Tomcat 5.5.23 or newer

#### Compatibility

- Quartz 1.8.3 or newer (with JMX configured)
- Java 1.6
- A Flash-enabled browser: IE7, Firefox 3.x, Chrome 9, Safari 4, Opera 9 or newer

---

## Known Open Issues

- [QTM-45](#) - No way to persist job execution history
- [QTM-47](#) - Job completion status not shown
- [QTM-52](#) - Manager does not detect addition of new scheduler
- [QTM-56](#) - Current selections are not maintained after operations
