

Library to Server Compatibility Matrix

Library-to-Server Compatibility Matrix

The following tables list the versions of the Ehcache and Quartz client libraries that are compatible with certain versions of the Terracotta Server. If your installation has constraints based on an embedded version of Ehcache or Quartz, use these tables to identify the versions of the Terracotta server that are compatible with your installation.

If you are upgrading, do not use these tables. Always upgrade components using the versions provided in the Terracotta kit you install.

Ehcache
